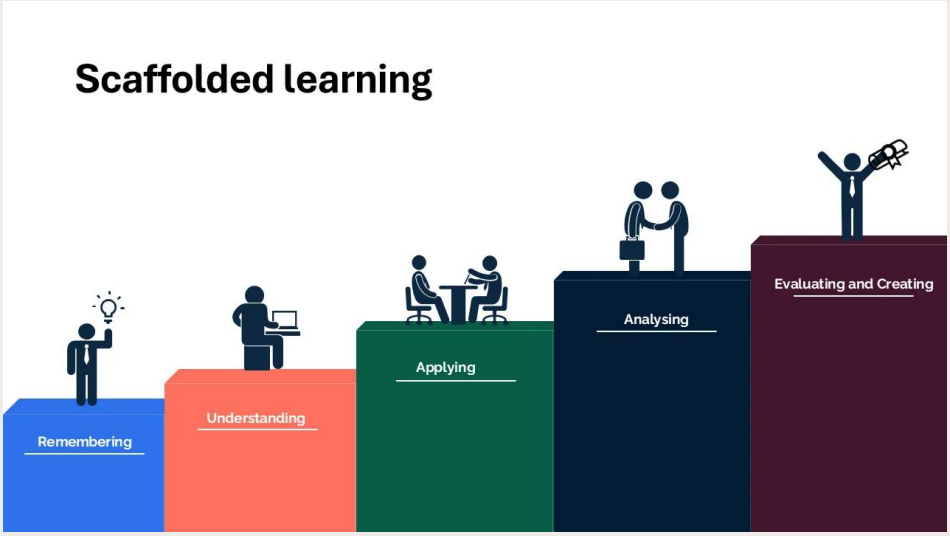
Project: UEE Full Training Product Review update as of August 2025

Powering Skills Organisation (PSO) is in the final stages of confirming members for its SME Working Groups and overarching Technical Committee. Nominations have now closed, and selected individuals will be notified shortly.

Parallelly, PSO is undertaking a comprehensive review and analysis of training products. This process includes, but is not limited to, the following focus areas:

- Current usage and relevance of training products
- Clarity and consistency of language, with an emphasis on the use of active verbs to enhance readability
- Alignment of Units of Competency with appropriate Australian Core Skills Framework (ACSF) levels
- Identification of foundation skills requirements within qualifications and Skill Sets to support transition to the new qualification reform templates mandated for use by Jobs and Skills Councils from 1 July 2025

PSO is also examining how scaffolded learning can be embedded across the UEE Training Package from Certificate I through to Advanced Diploma levels. Scaffolded learning refers to the deliberate structuring of content and support mechanisms that guide learners in progressively building competence and confidence. As learners advance through qualifications, such as from first to fourth year Units of Competency within a trade pathway the supports are gradually reduced, allowing for independent application of knowledge and skills.



Scaffolded learning plays a critical role in fostering lifelong learning. By offering a structured yet adaptive approach, it enables learners to build on prior knowledge, engage with complex content, and develop transferable skills for ongoing career development (eSkilled LMS, 2025).
